

How to Measure your HOOP

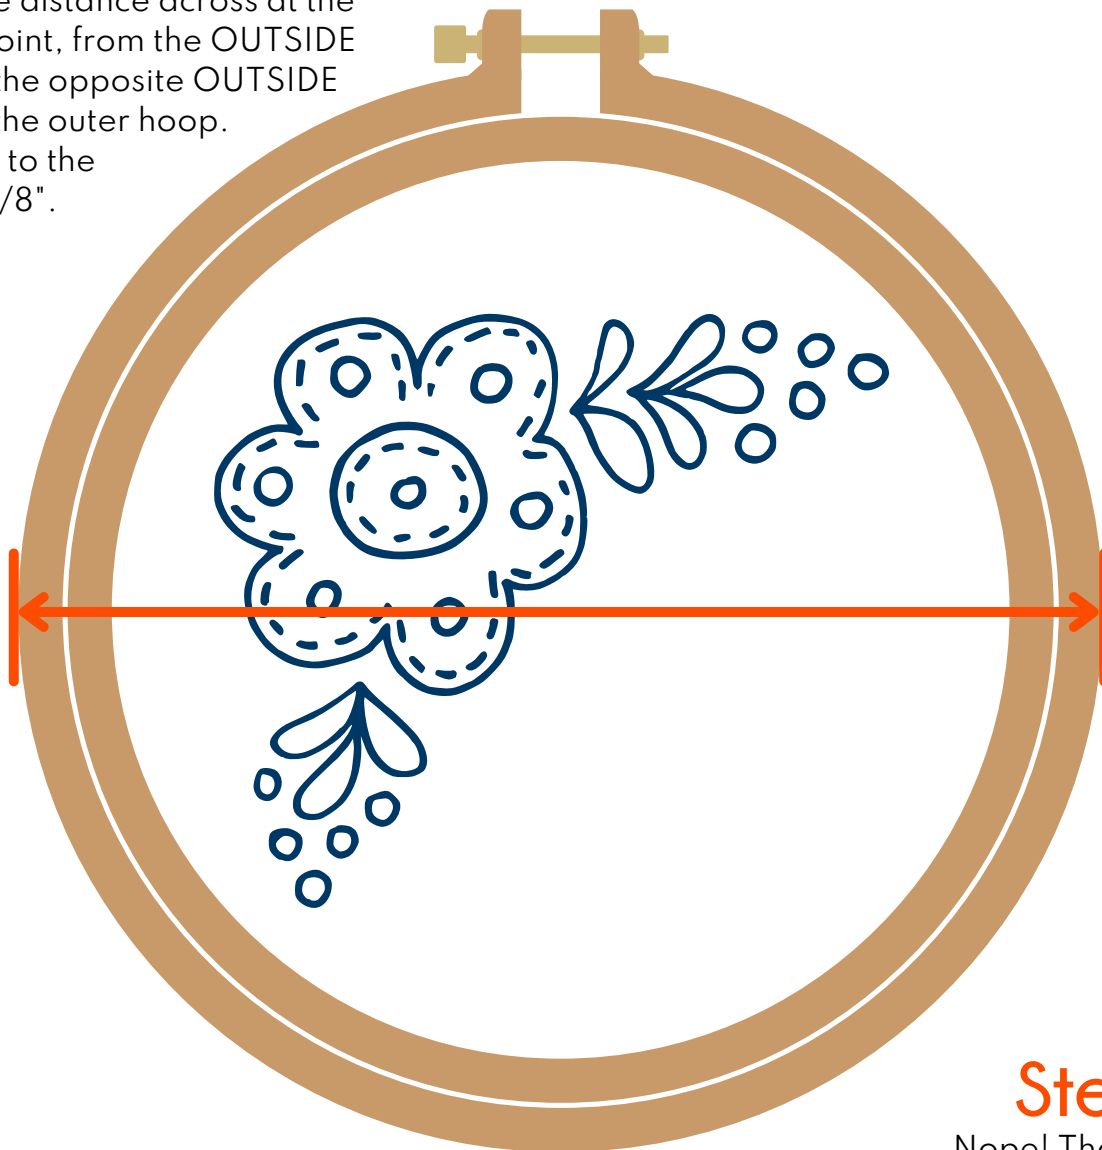

Your entire hoop fits into a recess on the back of a Modern Hoopla Frame. This is GREAT! This means it's tucked in tight and not at all visible, even from the side! This also means you'll need to know the diameter of your Hoop to choose the proper size for your Frame.

Unfortunately, not all hoop manufacturers make hoops the same size. The "6in" and "8in" sizes have the most variation. We have "small" and "XL" versions of the frames to address this problem.

Step 1:

Measure the diameter of your hoop, the distance across at the widest point, from the OUTSIDE edge to the opposite OUTSIDE edge of the outer hoop.

Measure to the nearest 1/8".

Step 2:

Nope! That was it!
Use that measurement to select
your frame on
